

Driving the Nissan Leaf

Estimated Range 110 -150 miles

Welcome to the Nissan Leaf

To start the vehicle, fully depress the brake pedal and press the **POWER BUTTON**.

Once the vehicle has powered up you will see your **RANGE** displayed.

The average range of the Nissan Leaf is 110-150 miles (depending on drive style). For the best results stay light on the accelerator and to keep the **POWER GAUGE** in ECO.

To put the Nissan Leaf 'in gear', keep your foot on the brake and shift the stick to select the mode you require:

R = REVERSE

N= NEUTRAL

D/B = DRIVE

Press the P button to select PARK.

If you have any issues using the car, please contact customer support on 01913751050

Charging

To open the charge flap on the front of the car press the **RELEASE BUTTON**.

To unlock the charging cable at the end of a charge, press the same **RELEASE BUTTON**. You can then remove the charging cable.

When the charging flap is open you will find two charging sockets.

Please use the standard type 2 socket (orange) on the **RIGHT** when charging at the vehicle's home bay.

The type 2 charging cable is stored in the boot.

Please put the car on charge when you return it.

A **blue light** will flash on the top of the dashboard to show you are successfully charging.

The car will charge at approximately 30miles/20% per hour.

The Nissan Leaf is rapid charge compatible.

The CHAdeMO Rapid charge socket is on the **LEFT** and can be used at Rapid charge points (i.e. those at motorway service stations).

The car will charge from low to 80% in approximately 40mins at a Rapid charger.

There is usually a fee for using a Rapid charger, and having the company's app or RFID card is often needed to start the charge.

Please use PlugShare or ZapMap to help you plan long journeys and research details of any chargers you may wish to use.

If you have any issues using the car, please contact customer support on 01913751050
